

Language, Learning & Level

From Learnincreation geeks

Language - Which and Why ?

Designing, Development or Programming is a creative job of work in order to create or develop something new. In computer science sector you encounter with many languages, and every language has its own preferences, applications and career growth along with required skills.

Our lesson for today:

In this pathway guide we will start with some computer languages and their uses or application along with their framework, so before you start your journey or enroll any geeks course, you must aware about the breif knowledge of computer languages and what they used for :

- Some Popular Computer languages are :
- C, C++, C#
- Java
- Python

Before we learn about the practical application of designing, development or programming in course lesson, let's try to answer this question:

What is a Computer languages ?

Are you familiar with any one Computer languages ?

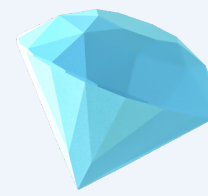

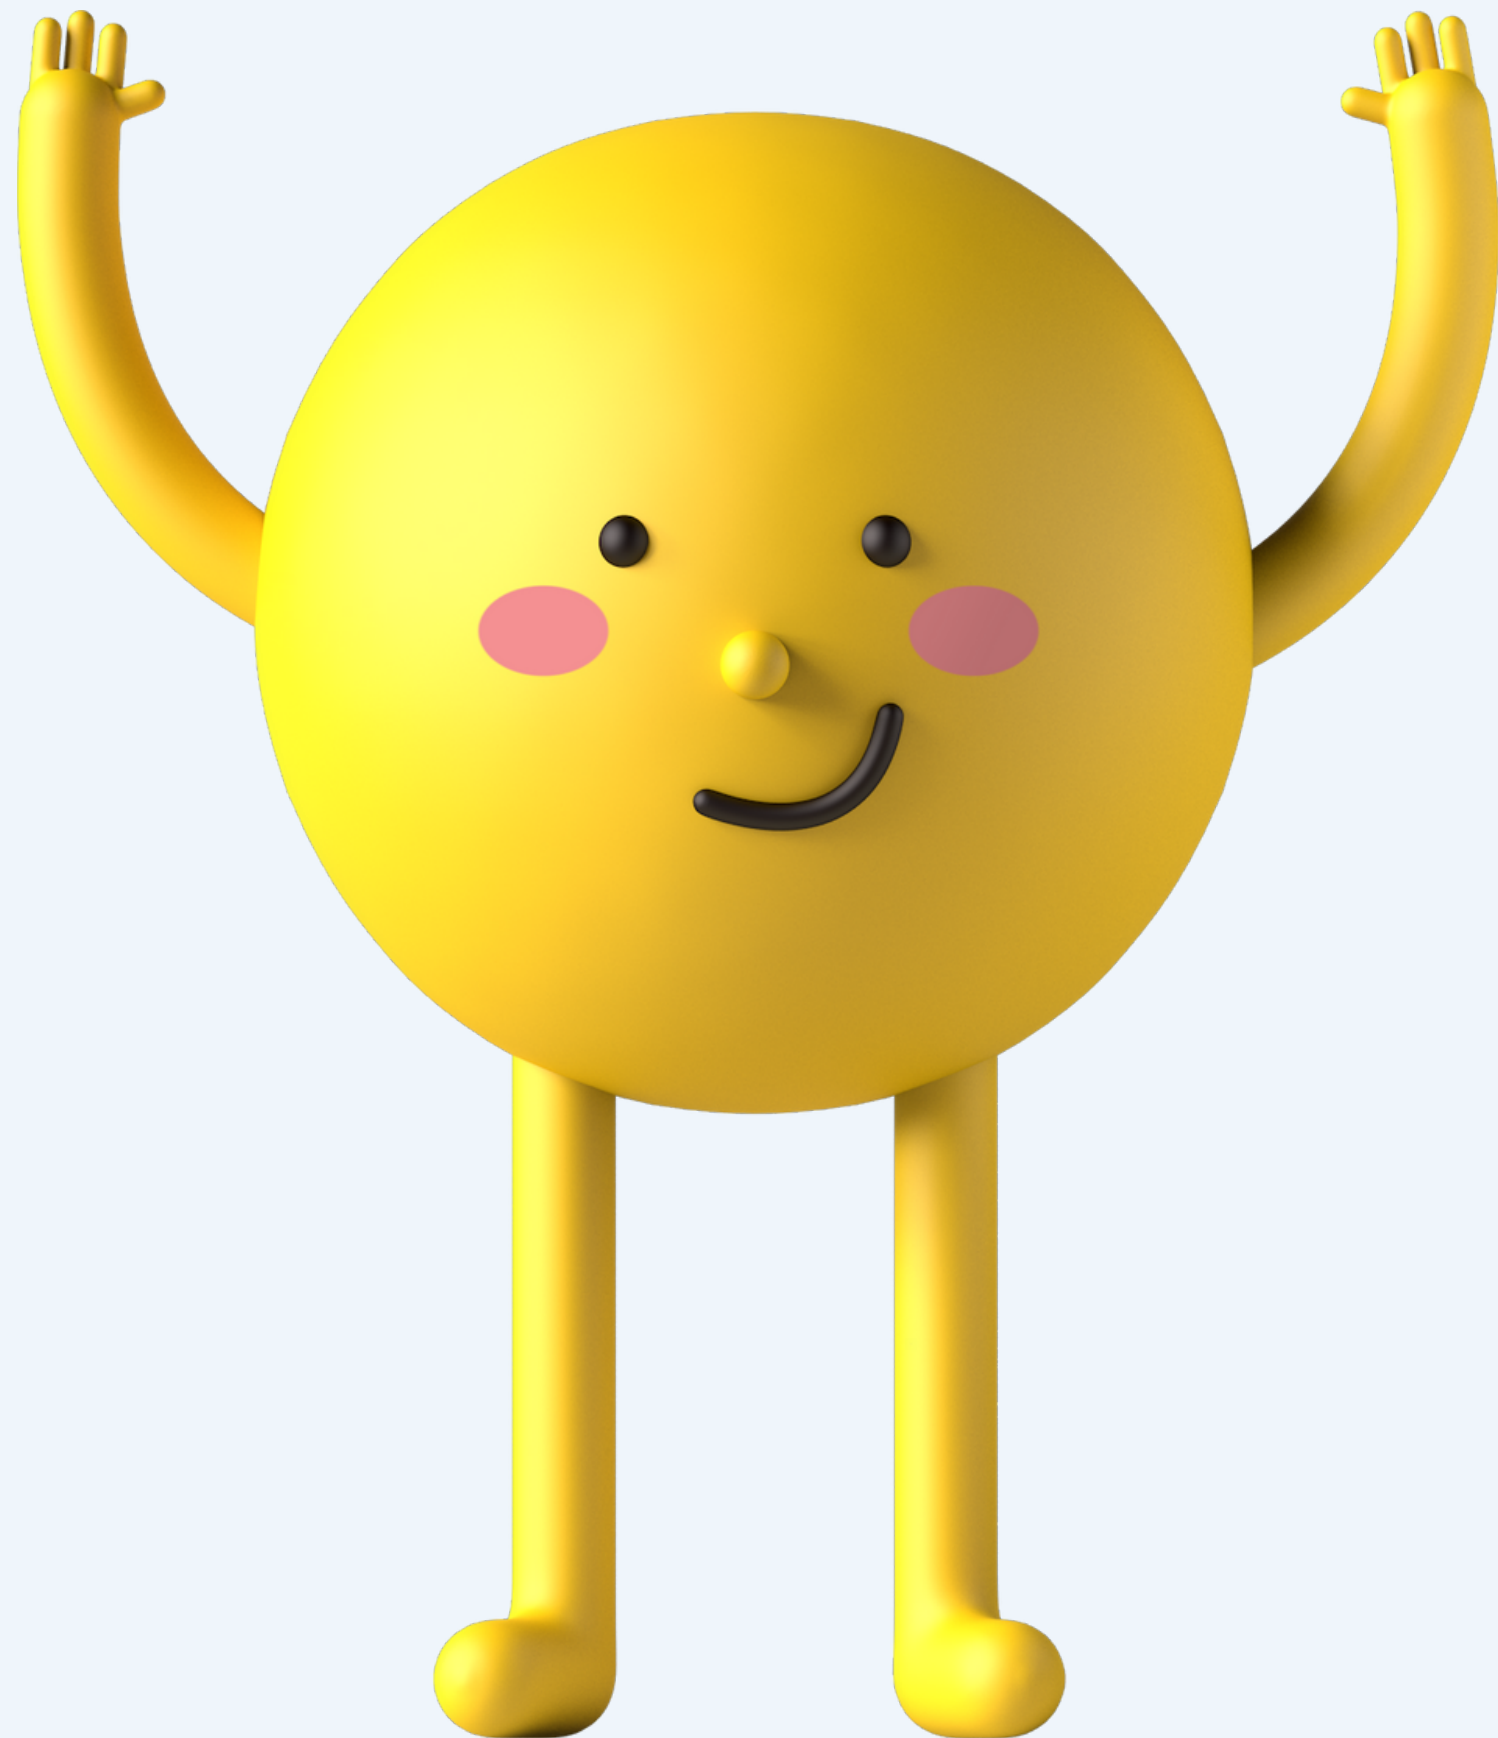

A

Like any other language (Hindi, English) which helps to communicate, languages that's helped to communicate with computer know as computer languages.

B

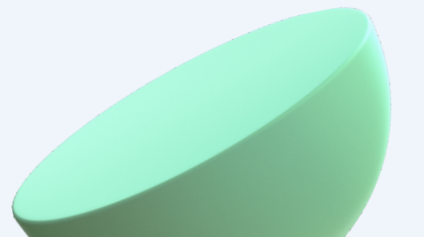

Different computer languages helps to develop different kind of stuff

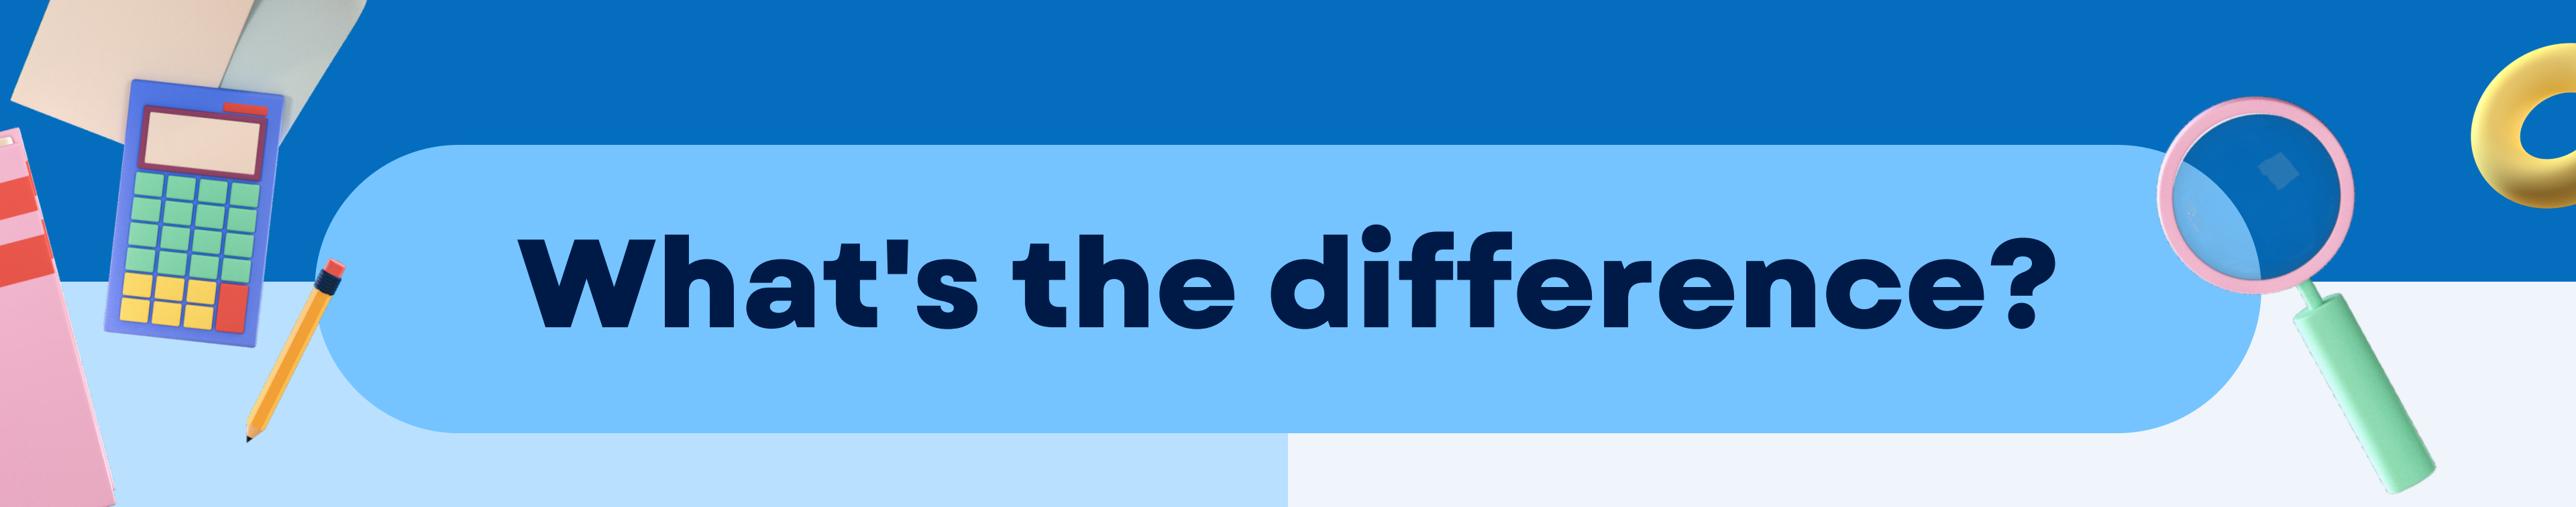

**If you answered C,
then you are correct!**

C is the most famous
Programming Language which
helps to develop multiple
applications for multiple
purposes.

What's the difference?

Computer languages

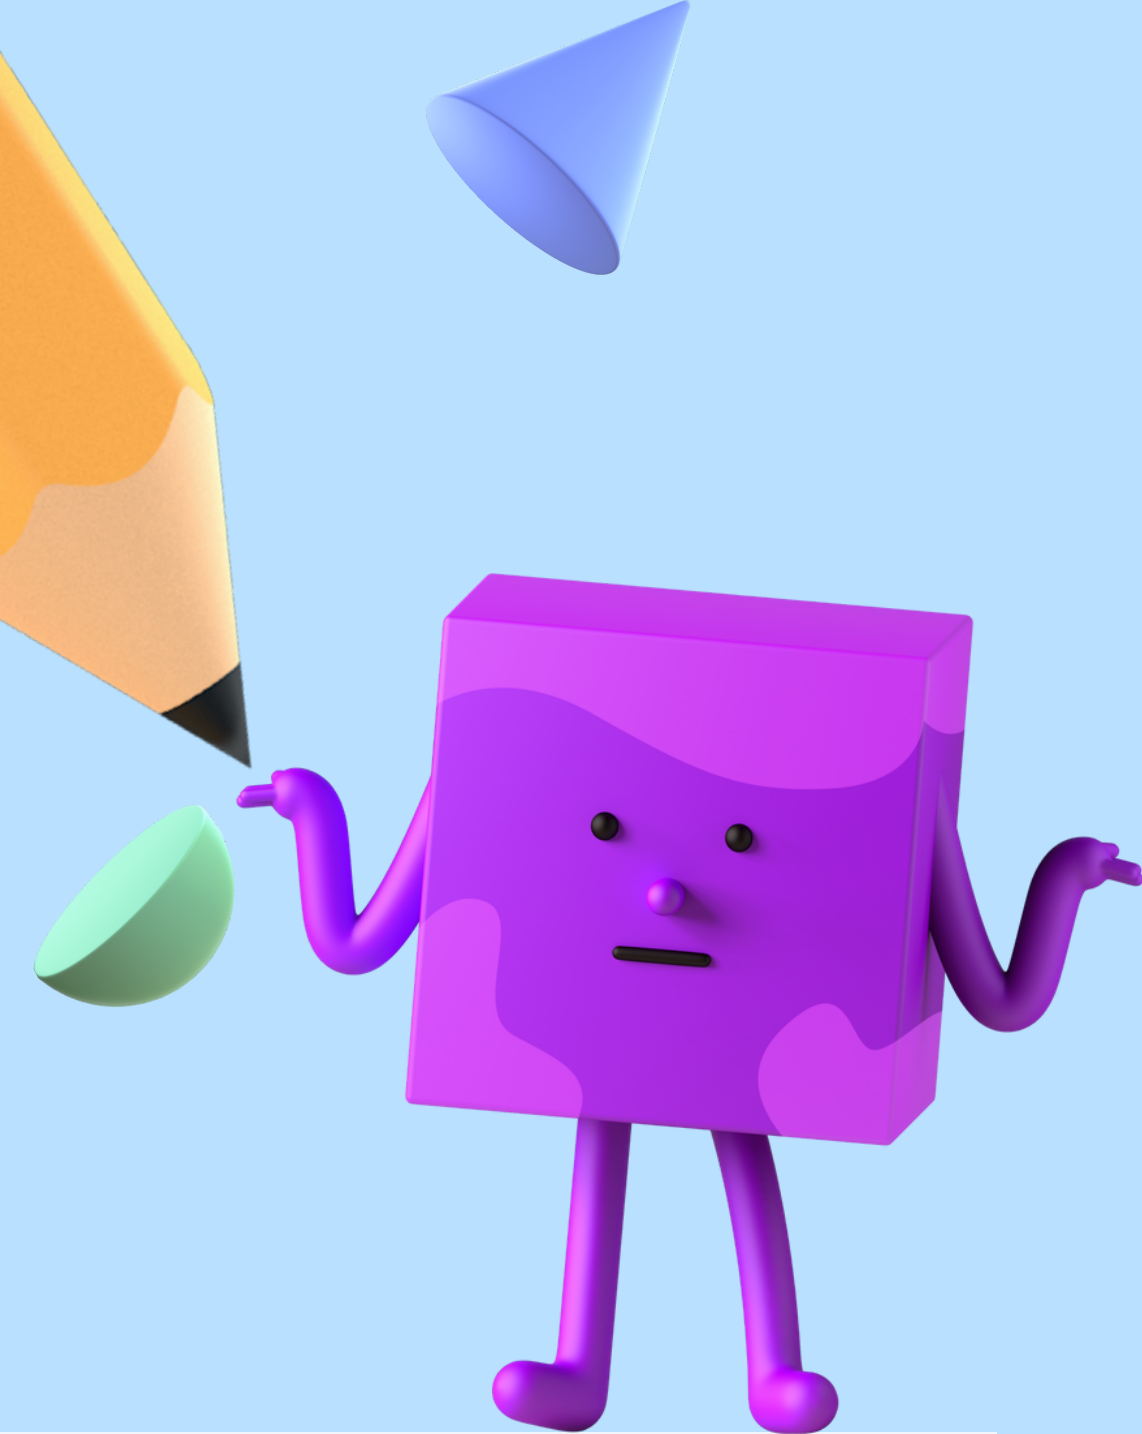

- In computer science, computer languages is a medium to communicate with computer (machine) in order to build program to get desired outcomes.

Framework

- In computer science, software framework is something you can consider as "A supportive structure, or development environment to develop a software with the help of computer languages."

What you want to be ?

- Web Developer
- BACK-END Developer
- Programmer
- Software Developer
- Software Engineer
- Game Developer
- Database Engineer

First fixed what you want to be, then feel what you want to be, and lastly Be what you want to be !!

For example...

Most of us have a myth about Java and JavaScript, both are same or different ?

Well both Java and Javascript are different language used for different purposes, Java has a wide application in enterprises mobile application development while JS (JavaScript) has its own preferences when you develop web application.

DOUBT OF THE DAY !

**Java or JavaScript is Same
or Different ?**

The Formula of Learning

First get relief then get started:

For Next 45 min. (Average concentration span)

**Don't Fixed Time OF Learning,
Fixed GOAL**

Next don't fixed Time span , fixed your
lesson goal.

3 hours × 7 days = 21 hours (seems to Hard)

3 lesson × 7 days = 21 Lesson (course may left, but you learn more)

A page from Founder Desk

**Don't work Hard
Work Smart, Albert !**

Operating system Or System Tools

- Language - C / C++
- Popular Framework - Microsoft.net, MFC, Qt, KDE, Gnome
- Platform - Mobile, Desktop, Embedded
- Useful for - System Application, Embedded system, Games Development, cloud and much more.

Application and Web development

- Language - C#
- Popular Framework - Microsoft.net, Xamarin
- Platform - Cross Platform , Mobile, Enterprises Software and Applications.
- Useful for - Games Development, Server Side Programming, Web development, Mobile Application and much more.

Enterprises Application Development

- Language - Java
- Popular Framework - Spring, Hibernate, Strut
- Platform - Web, Mobile, Desktop, GUI
- Useful for - Developing Enterprises Application software development, mobile application, web application and much more.

Web and Software Application

- Language - Python
- Popular Framework - Django, Flask
- Platform - Web , Desktop
- Useful for - Building, web application, GUI application, software application along with wide application in Artificial intelligence, machine learning, data analysis and much more.

Interactive Web Development

- Language - JavaScript (Js)
- Popular Framework - Node.js, Angular.js, React.js, Vue and much more.
- Platform - Web, Desktop, Scripting
- Useful for - Building rich interactive interface of web developement and writing frontend scripting.

Web Development

- Language - php
- Popular Framework - Cake PHP, Larawell, Symfony, Phalcon.
- Platform - Cross Platform (Desktop, Mobile, Web), Back End Development.
- Useful for - Building dynamic web portal, web application, CMS (content management system), e commerce portal or even a social media site like Facebook. (Starting version)

Data Management

- Language - SQL
- Platform - Database Management
- Useful for - Store or deal with large amount of data tables.

You will know more about this in respective course lectures.

Server Side Programming

- Language - go lang or go
- Popular Framework - Beego
- Platform - Cross Platform, Mainly for desktop
- Useful for - Web application, GUI application, Cloud services, BACK-END Technology, Distributed Network and much more.

iOS development

- Language - Swift (owned by Apple)
- Popular Framework - Snapkit, RxSwift
- Platform - iOS platform
- Useful for - Developing various kind of application for iOS system only

What does this mean?

This mean while going with your decided pathway and computer languages, you need to learn related framework or need to aware about supported libraries.

Don't be worry about lot many things (likes developing environment, supported libraries, framework) - you will go with detail learning of concept when you Enroll, but for now you need to understand it's a continuous path of learning !

Looking for Success formula :

So you are at end of this Pathway Guide and you learn enough before starting your journey. We wish you better future with lots of blessings and at last, you need to clear you mind that there is no success formula, instead take successful step towards what you want to be -

JUST FOLLOW 3 R RULE :

where:

R = Read

R = Repeat

R - Revise

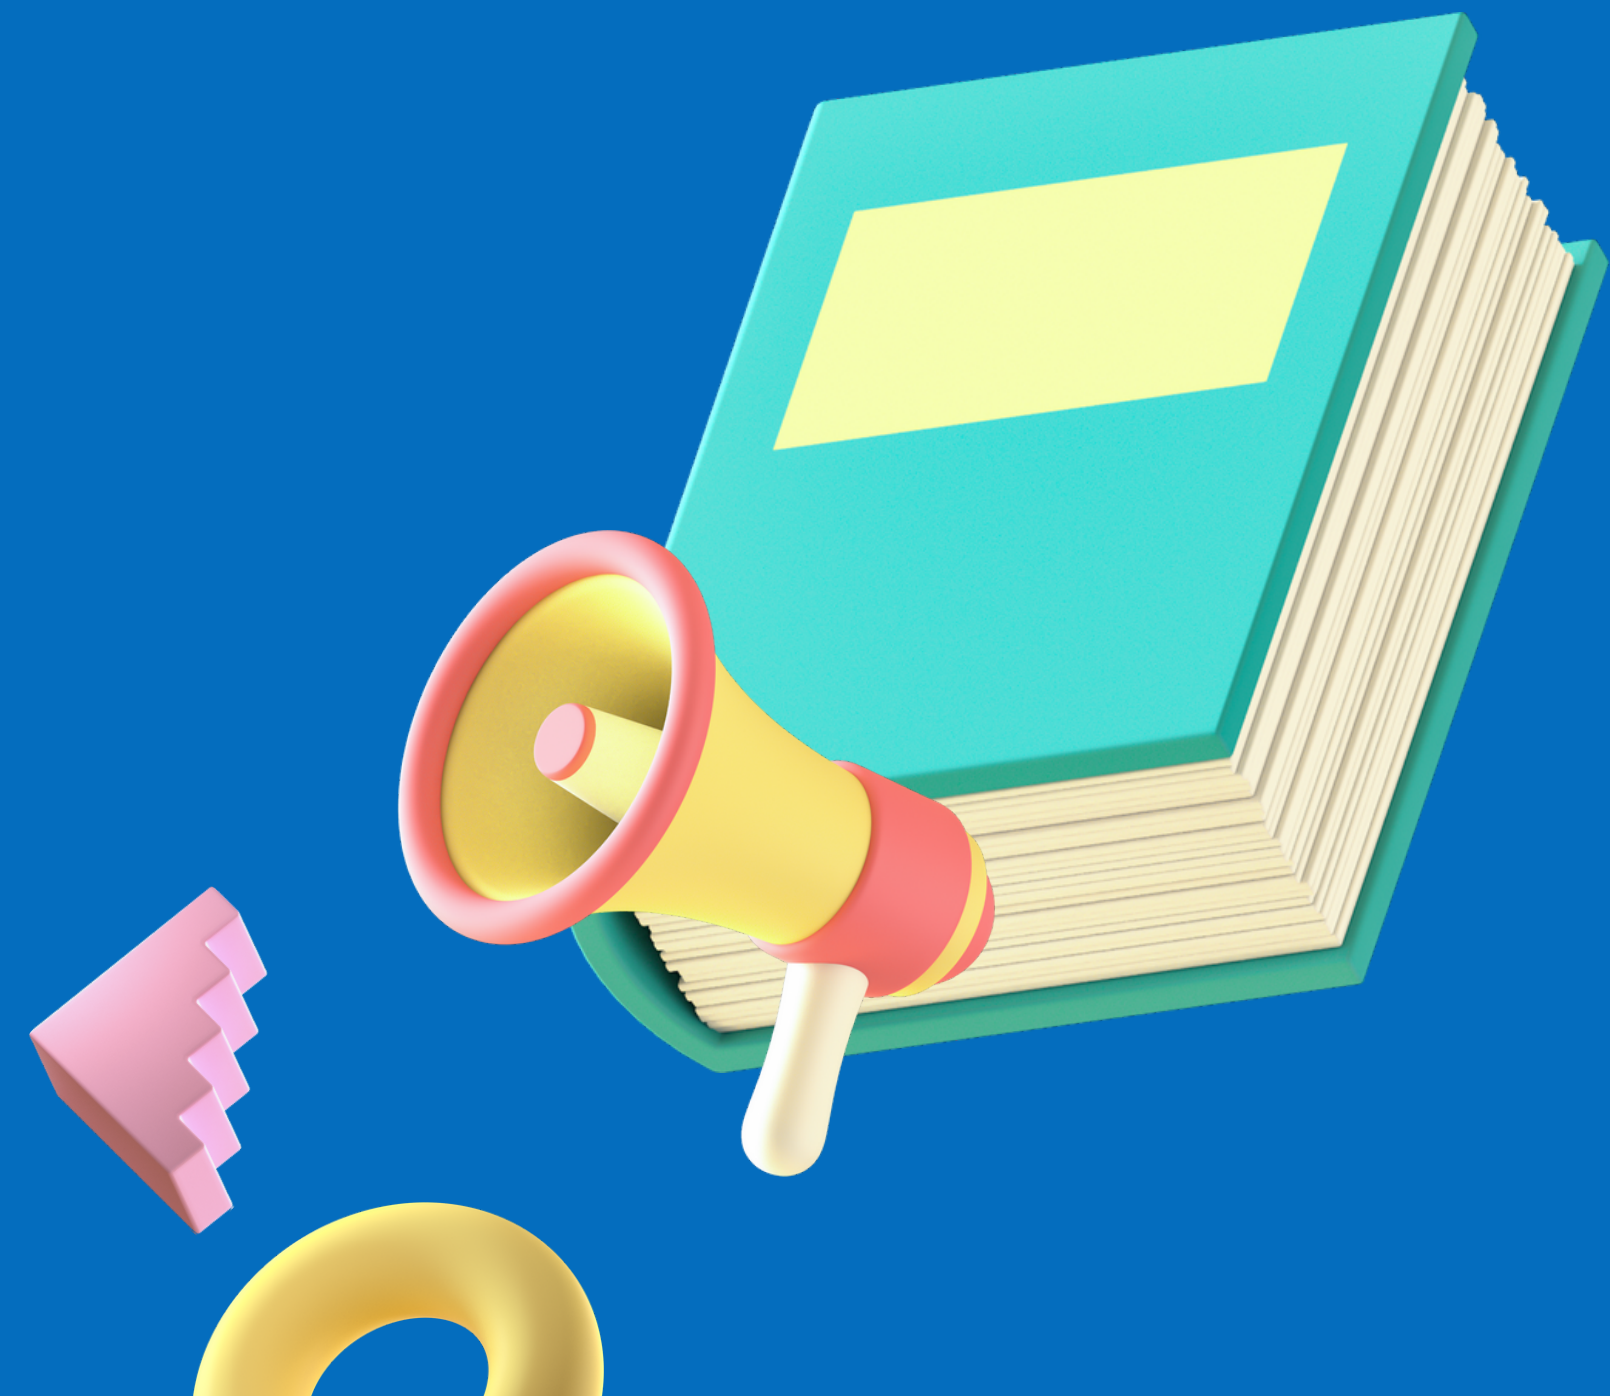

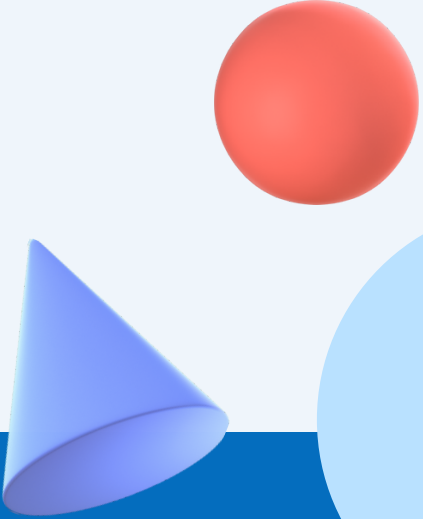

Let's see our courses :

Now, let's explore our geeks portal for computer science courses and learn Computer course.

- Don't get worry about course fees, we provide courses free to students.
- How do I get course content after I enrolled the course?
- Every course has its course lesson in web format so you can learn from anywhere at anytime, apart from lesson you will also look for lessons video lectures or you can get a course pdf directly in your mail inbox.

Thanks

We love to hear you :
