

How to be ?

From Learnincreation geeks classes

Hello and welcome back to
geeks classes!

Before you
start, you must
have a path -

A road map

If you are reading this,
you surely have a vision
of I.T career, and you
must have a required
skills to match with your
Passion.

It's ok if you
are not smart

But it's not ok if
you are not
learning

Set your top 3 Goals
and Learn Required
skills

Now let's get
familiar with our
class environment.

Take out a piece of paper and pencil, and
follow along!

How to be Front End
Developer ?

How to be Back-end
Developer ?

03

How to be Full Stack Web
Developer ?

04

How to be Software
Developer ?

05

How to be Software
Engineer ?

Now let's learn about required skills !

Practice more and build concept !

Build Project for building your Professional
Portfolio !

Front end developer

Responsible for user side interactions with applications.

Next, Back-End developer !

You must know about

Back End Developers

Main responsibilities are maintaining core database, building database relationship, managing application program interface (APIs) Testing and Deployment responsibility.

Start with Programming

To be a Back-end Developer you must know about computer programming languages such as Php, JavaScript, Python etc.

Clarity with Object Oriented Programming concept and Data Structure is essential skills with respective language

```
content: ";
content: none;
}
table {
    border-collapse: collapse;
    border-spacing: 0;
}
button, input, select, textarea { margin: 0 }
:focus { outline: 0 }
a:link { -webkit-tap-highlight-color: #FF5E99 }
img, video, object, embed {
    max-width: 100%;
    height: auto!important;
}
iframe { max-width: 100% }
blockquote {
    font-style: italic;
    font-weight: normal;
    font-family: Georgia,Serif;
    font-size: 15px;
    padding: 0 10px 20px 27px;
    position: relative;
    margin-top: 25px;
}
blockquote:after {
    position: absolute;
    content: "'";
```

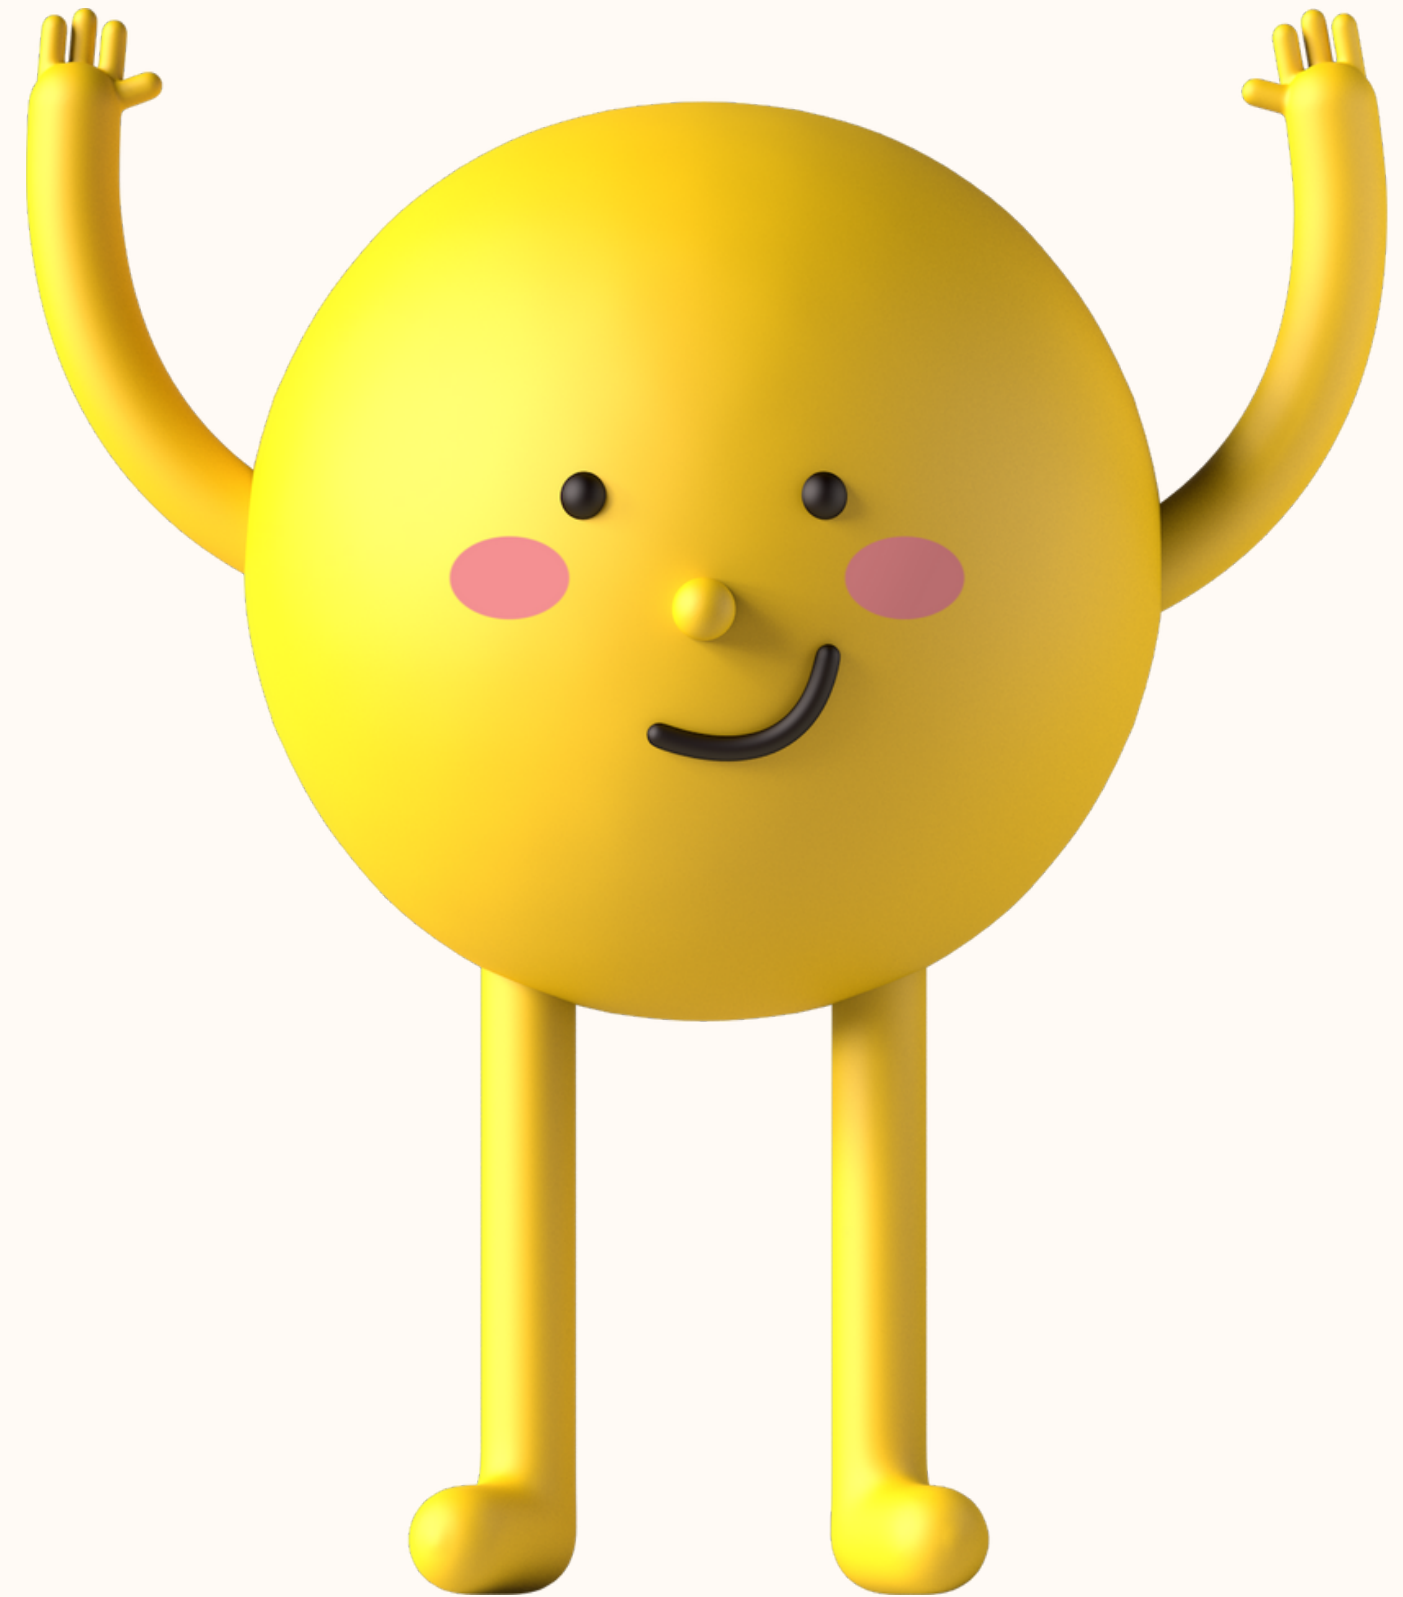

```
blockquote p { margin-bottom: 10px }
strong, b { font-weight: bold }
em, i, cite {
    font-style: normal;
    font-family: arial;
}
small { font-size: 100% }
figure { margin: 10px 0 }
code, pre {
    font-family: monospace,consolas
    font-weight: normal;
    font-style: normal;
}
pre {
    margin: 5px 0 20px 0;
    line-height: 1.3em;
    padding: 8px 10px;
    overflow: auto;
}
pre {
    margin: 0 8px;
    height: 1.5;
}
pre {
    margin: 1px 6px;
    height: 1.5;
}
pre {
    margin: 0 2px;
    height: 1.5;
}
```

Settings Development Environment and Frameworks

Develop rich interactive web apps with the help of frameworks such as Django, Node.js, Microsoft .NET etc.

Frameworks are something which help you build applications with the required environment and set everything ready for your projects.

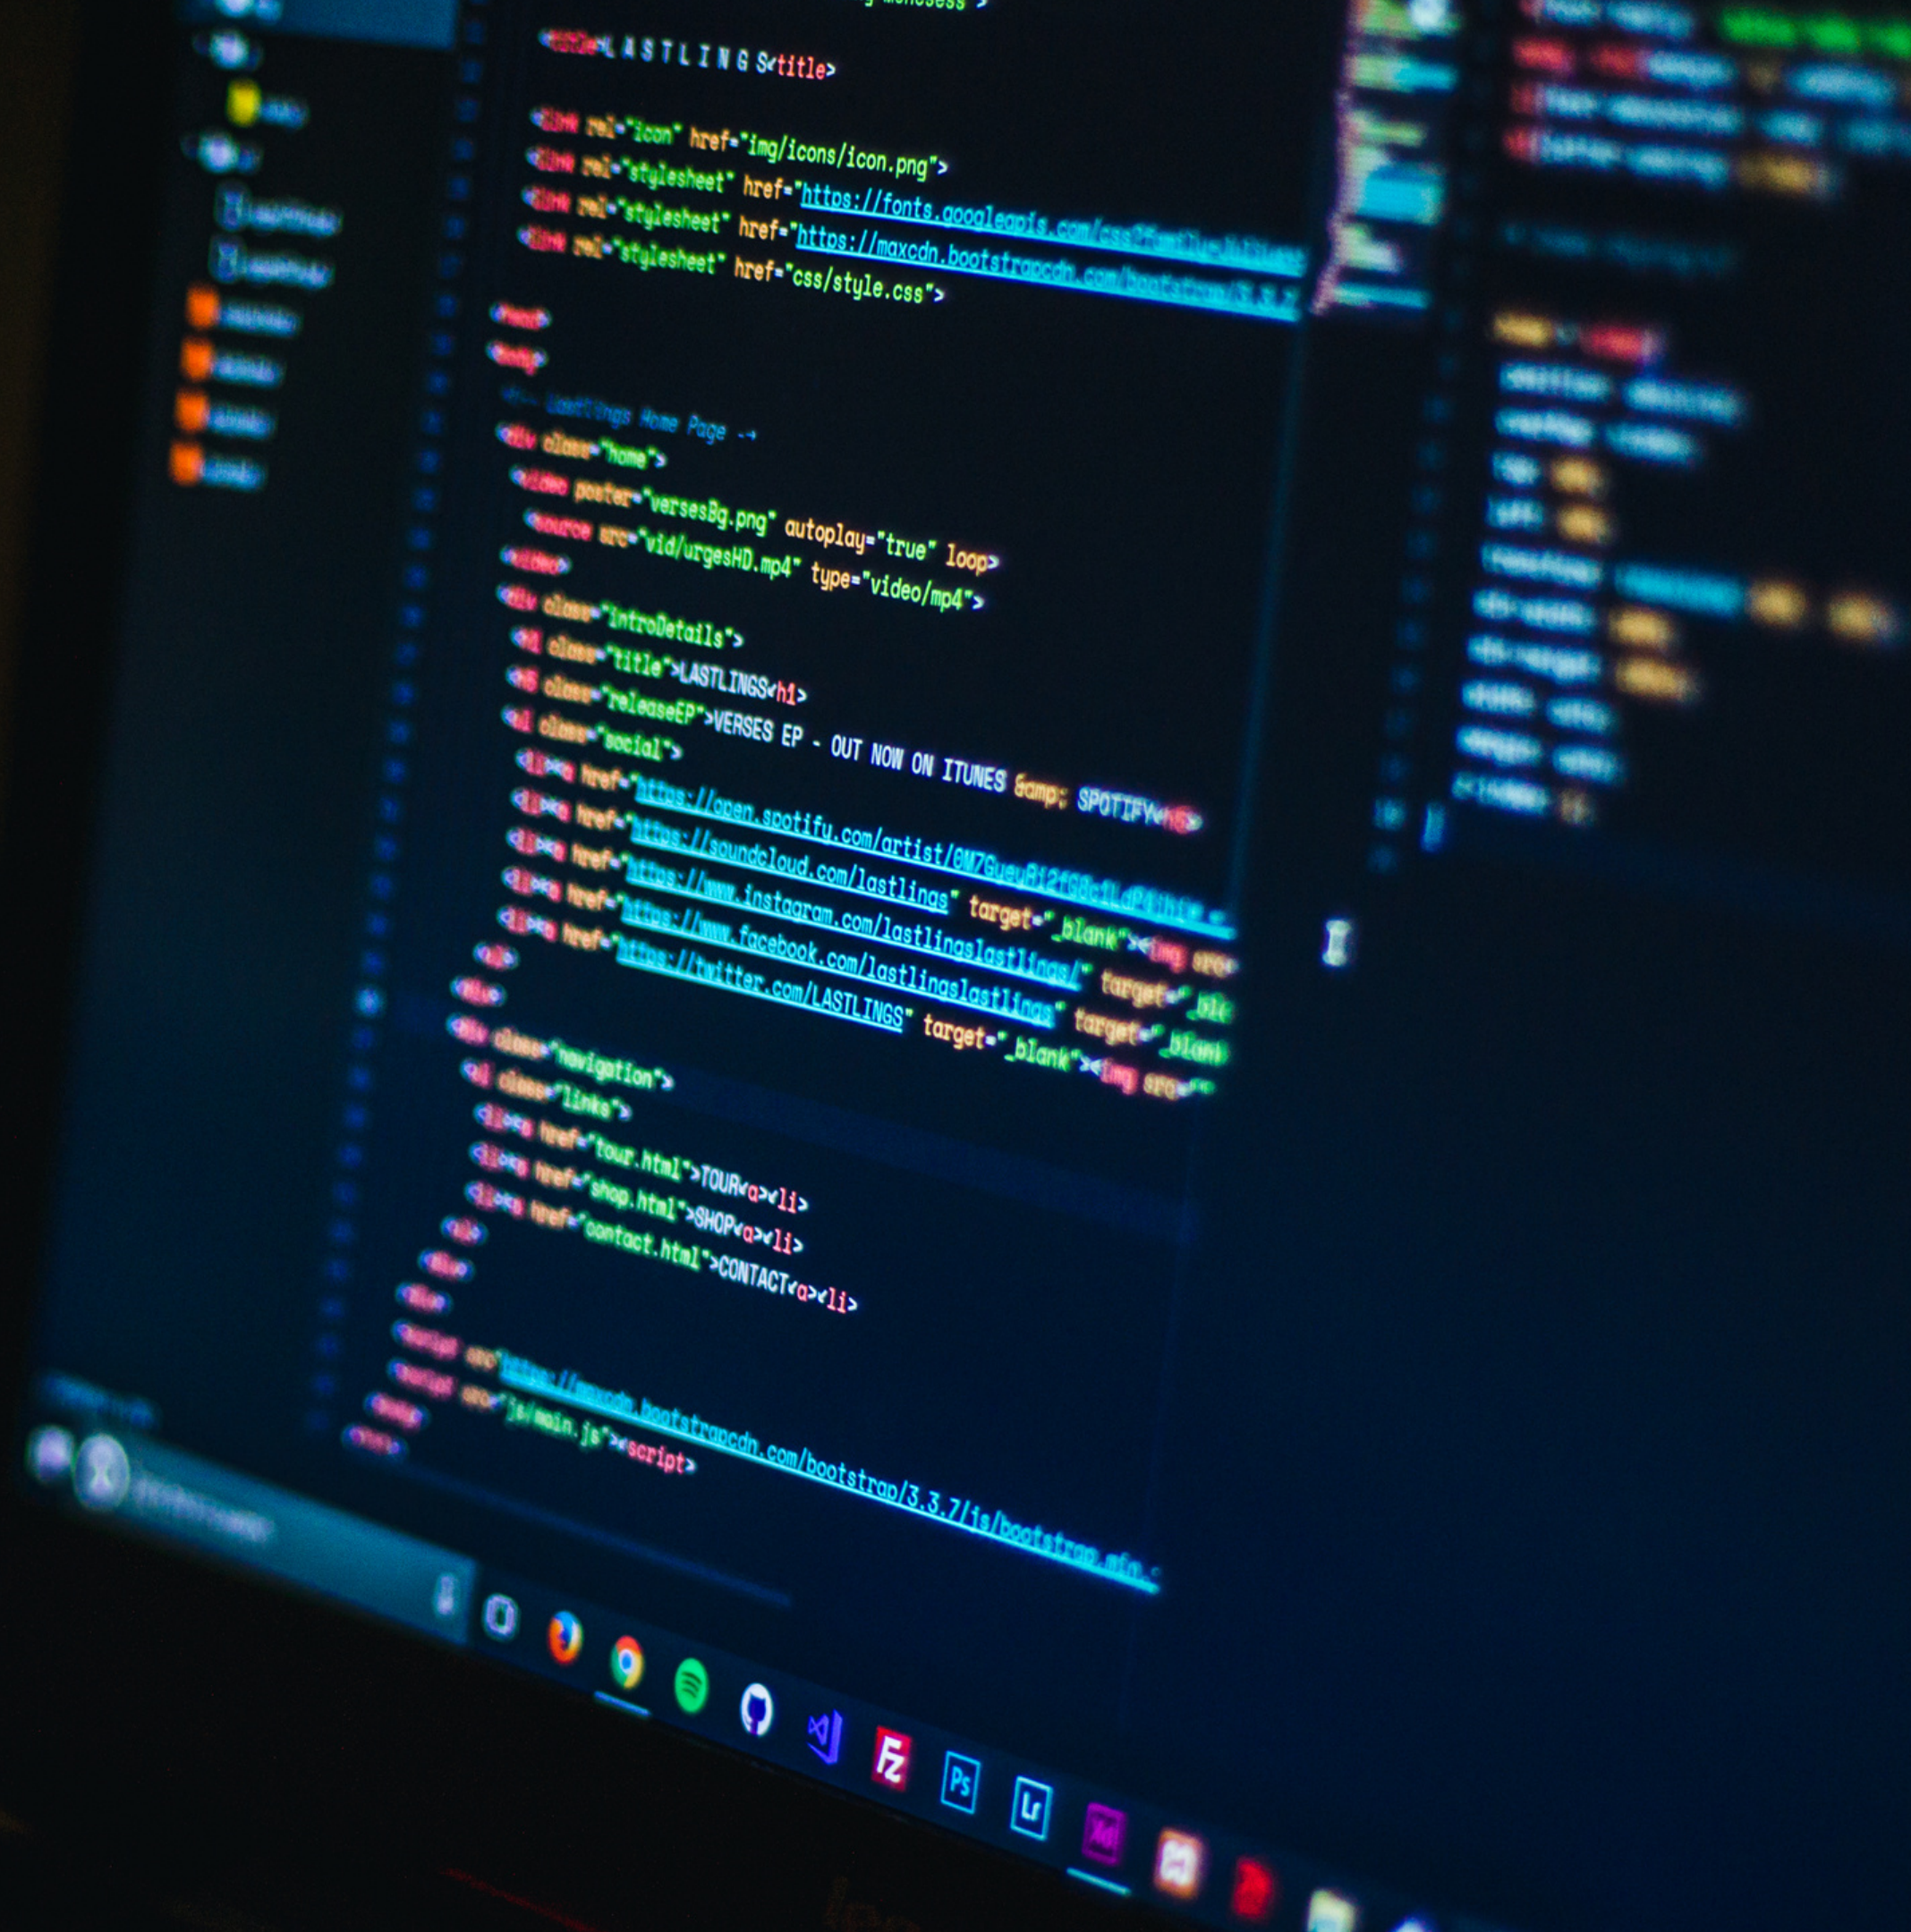

Database Relationship

Learn Database Management System (DBMS), Handling database request, relations and learn to manage large data.

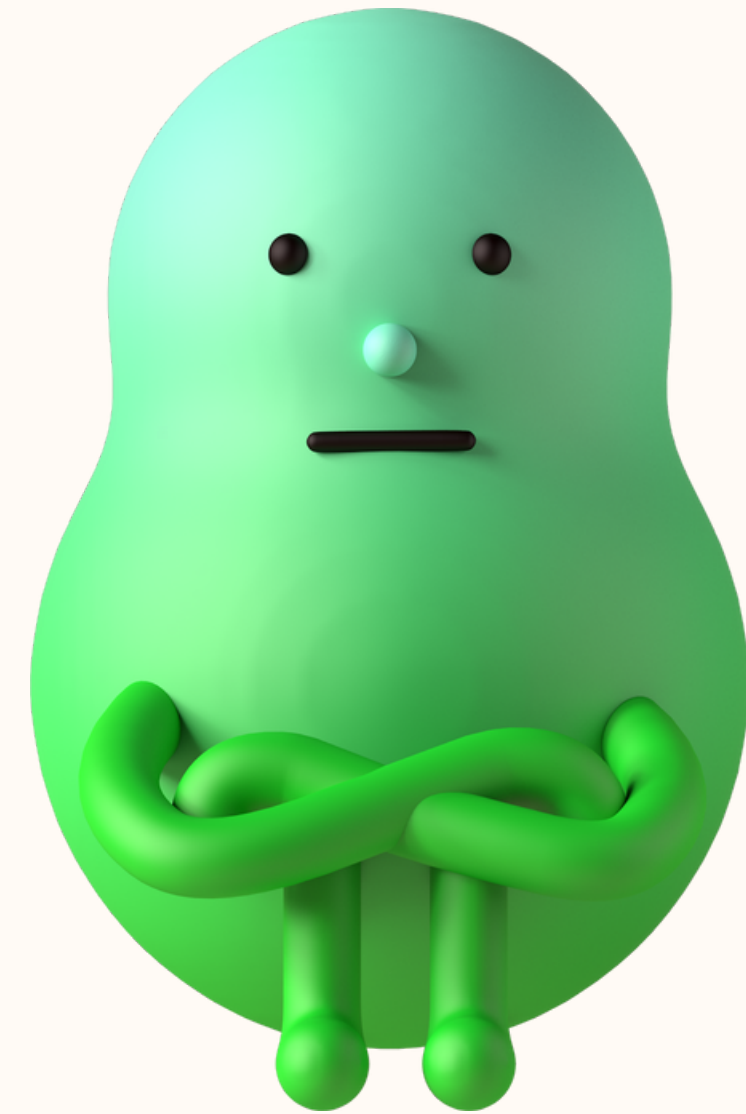

Learn database GUI application like pgAdmin and others for managing database.

Testing & Debugging

Get Familiar
with Industrial
tools like
GitHub and Git

Now, the final step

Designing, Development are creative job of work so practice is the key, and you can unlock your career growth via building projects with the help of practice key.

Also, building projects will help you to build your Portfolio, so last step is to be ready with your project portfolio, and be in Developer community.

Full Stack Web Developer

When you learn both
Front end development
and Back-end
Development then, with
the little more
knowledge you will
become Full Stack
Developer, who knows
the shit with scratch.

That's all for today lesson !

Before learning How to a
Software engineer or
developer ! Do you
know What's a
difference between
Software Developer and
Software Engineer ?
